

## Wellwash 4 Mk 2 - SOLD

Wellwash 4 Mk 2 - SOLD

Wellwash microplate strip washer

With their unique and proven design, the co-axial wash heads of the Wellwash 4 Mk 2 ensure excellent washing efficiency and low residual volumes of less than 5 ul. For clean delivery of washing buffer, the inner dispensing tubes are made of stainless steel. A continuous vacuum in the outer tube prevents cross-contamination and ensures complete liquid removal. Switching between the 8- and 12-way wash heads takes just a few seconds.

A programmable dispensing volume of up to 750 ul enables effective removal of proteinaceous material in a top-washing process.

For fast and accurate selection of routine protocols, the Wellwash 4 Mk 2 comes with four standard program cards (1-4 washing cycles)

The Wellwash 4 Mk 2 combines high performance and flexibility with reliability, simplicity and ease of use. This advanced microplate washer meets the exacting standards of today's assay requirements.
